**SUBJECT: Additional Turbocor Production Line at Greenfield Facility in TLH**

---

## **Purpose**

This bulletin is to inform our customers that Danfoss Turbocor Compressors is expanding its manufacturing capabilities through the addition of a new production line at the Greenfield Facility in Tallahassee, Florida, USA.

## **Summary**

As part of Danfoss' continued growth strategy and commitment to supporting future customer demand, a new Turbocor compressor production line is being established at Greenfield Facility in Tallahassee.

This investment reflects Danfoss' ongoing commitment to strengthening manufacturing capabilities, supporting long-term portfolio growth, and delivering continued value to customers and partners. Production on the new line is planned to begin in Q2 2027.

**Figure 1 - Greenfield Facility**

Compressors produced on the new line will follow the same manufacturing processes, quality standards, testing procedures, and product requirements currently used at the existing Greenfield facility operations. As a result, customers should not expect any changes to compressor performance, specifications, fit, form, function, or product quality as part of this capacity expansion.

Our goal is to ensure a smooth and seamless ramp-up of the new line while maintaining the high standards our customers expect from Danfoss Turbocor. Further updates will be shared as we move closer to production start.

## **Action Required**

No action required.
